About

Bio

Bioengineering undergrad at VIT Bhopal exploring the intersection of biology and technology. I work primarily with Python and have a strong interest in AI/ML, specifically its applications in DNA analysis and bioinformatics. Joining Kaggle to dive deeper into data science, practice with real-world datasets, and level up my machine learning skills.

VTOP-Timetable-Automation
Public
A Python automation bot that logs into VTOP, solves Captchas using Tesseract OCR, and navigates hidden frames to auto-download the student timetable.
Python
Genomic-Analysis-Toolkit-
Public
A high-performance bioinformatics dashboard built with Streamlit. Features real-time DNA analysis, thermodynamic calculations, and interactive 3D double-helix visualization.
Python

Project Report:

For my digital portfolio, I set up profiles on GitHub, LinkedIn, and Kaggle. Each of these platforms does something specific for my tech and bioengineering journey. GitHub is basically my personal code vault and portfolio. It is where I host my Python projects, like my DNA analysis web app and various automation scripts. Over the next four years, I will use it to track my coding progress and showcase actual working software. LinkedIn is my professional networking space. It is where I can connect with peers from VIT Bhopal, industry professionals, and eventually look for internships. I plan to use it to post updates about my academic milestones and build a solid network before I graduate. Lastly, I chose Kaggle because of my strong interest in AI and machine learning. It is the perfect place to find real-world datasets and practice building models. Throughout my degree, I want to dive into Kaggle competitions to sharpen my data science skills, especially in bioinformatics. By keeping these three platforms updated over the next few years, I will have a strong, well-rounded digital presence that shows exactly what I can build and solve.
