TASK 1
Poster

What Digital Literacy Is:

Learning how to find, evaluate, and use online information effectively.

Learning how to find, evaluate research tools, and use digital applications in your education.

Useful Digital Tools for Students

- Research databases
- Databases
- Research
- Note-taking apps
- Organization tools
- Web
- Strong passwords
- Organization tools
- Scan passwords

Safe Internet Practices

Create strong passwords, recognize scams, and protect your privacy.

Project Report

For this task, I used Canva to create the infographic. My design is basically a visual guide to help our batchmates understand digital literacy. It shows three main things. First, it explains what digital literacy actually is, like how to find and evaluate information online. Then, it goes into useful digital tools for us students, highlighting apps for research and keeping our coursework organized. The last part covers safe internet practices, mainly reminding everyone to use strong passwords and watch out for scams.

Honestly, the most difficult thing while making this was trying to fit all that information onto just one page without making it look like a huge, boring wall of text. There is a lot to cover with internet safety and tools, so cutting down my sentences and finding the right icons to explain things visually was pretty challenging. But it was also kind of interesting to see how changing the layout and colors made the whole thing way easier to read. I think it turned out pretty well.
